

Job Summary

Global Remediation Technologies, Inc. (GRT) is seeking a highly skilled, detail-oriented Environmental- or Geological- Engineer to lead and manage key elements of environmental investigations and remediation projects. This position requires excellent engineering and writing skills, creativity and attention to detail along with working knowledge of environmental compliance regulations. GRT's team of professionals helps manage an interesting and diverse portfolio of contaminated sites within the State of Michigan and we are looking for a new team-member to join us!

Primary Focus

- Investigation strategy development
- Remedial investigation data assessment/reporting
- Risk assessment and feasibility study preparation
- Conceptual site model development
- Pilot study and remediation systems design
- Remediation system operation oversight
- NPDES and air permit compliance
- Performance monitoring plan preparation and management
- Subcontractor RFPs, scheduling, and management

Desired Education/Licensure

Bachelor's degree in Environmental Engineering, Geological Engineering or Civil Engineering. PE license, CPG certification, and/or MS degree a plus.

Desired Skills/Experience

- 5+ years' experience in environmental professional field
- Demonstrated technical proficiency in environmental sciences
- Knowledge of applicable environmental compliance regulations
- Committed to customer service and worker health and safety
- Proficient with Microsoft Office-based software programs

Currently Offered Benefits

- Medical insurance for employee as well as employee's spouse and children
- Reimbursement and support for tuition, continuing education, and professional/personal development
- Vacation/sick/personal PTO and paid holidays
- Opportunities for hybrid and flexible schedules
- 401(k) and profit-sharing

About GRT

GRT is a full-service environmental consulting firm specializing in remedial investigations, feasibility studies and remediation of contaminated sites, primarily on behalf of the State of Michigan. GRT's daily mission is to perform as a premier assessment, design, and remediation service provider recognized for our talent, technical proficiency, and ability to bring emergent and proven technologies to the field. Our goal is to be 100% effective at understanding our client's needs, developing and implementing solutions, and providing ongoing technical support. Throughout this process, we are mindful to perform these goals with complete integrity and professionalism. As a small business, each GRT employee is an integral part of the team and is cared for as family.
