

11th

Environmental Risk Management Workshop
**Best Practices for Groundwater
Remediation and Management**

SPONSOR INVITATION

The American Institute of Professional Geologists (AIPG) Michigan Section is extending an invitation to sponsors for the 2022 Environmental Risk Management Workshop to be held **June 14-15, 2022**, at the **Ralph A. MacMullen Conference Center** in Roscommon, Michigan.

The 11th in a series of one-of-a-kind training events hosted by the AIPG Michigan Section focuses on providing quality technical information and case studies. These environmental workshops bring together a wide range of topic expertise from consulting, regulatory, academic, and owner perspectives. We focus on practical application and case studies for environmental professionals.

This unique workshop forum creates excellent opportunities for

Networking

Knowledge Sharing

Collaborative Problem-Solving

Innovative Product Introduction

Field Demonstrations

Leadership and Break Sponsorships are available at various levels!

This year the AIPG Michigan Section is featuring exhibitors during one of the presentation sessions giving exhibitors at the Michigan and Superior Glacial Lobe levels an opportunity to speak about their services for 2-3 minutes. We would also like to dedicate one entire track to demonstrations during the day as well as featuring opportunities for attendees to see and perhaps try technologies or products.

Our topic is about the **Best Practices for Groundwater Remediation and Management** at the workshop. Hazardous substances in groundwater pose a vastly complex set of challenges.

Questions about the hydrogeologic setting, contaminant properties and characteristics, risks to possible receptors, and remedial and management options are raised. The standard approach more than 30 years ago was to pump and treat contaminated groundwater to remediate and mitigate the risk. Thanks to innovations applied by scientists and engineers at sites worldwide, whether adapted from other industries or original concepts, there are many more approaches being applied today as each site with groundwater contamination poses a unique set of circumstances and challenges.

Groundwater is a vital natural resource, and trillions of dollars and entire careers are spent on tackling issues related to groundwater contamination. We have learned that thoughtful and intentional approaches or strategic remediation and management are needed to address contaminated groundwater. Strategic remediation and management include a holistic approach to evaluating the aquifer system, its uses, and groundwater governance when determining what the risks are and how best to remedy them. Calculation of the environmental footprint of remedial alternatives, especially with the environmental, social, and corporate governance is an important consideration for organizations.

For more information about the program theme and topics of interest for demonstration, please see our [Call for Abstracts](#). Abstracts are due January 17, 2022. **The deadline for field demonstration presentation descriptions is April 1, 2022.**

Submit your field demonstration descriptions to:

AIPG.MI.Section@gmail.com.

Sponsors may register and pay online at our Eventbrite website or contact Sara Pearson at pearsons@michigan.gov for alternative payment instructions.

NOTE: We are optimistic that we will be able to hold this event in person and are planning to do so following any CDC recommended guidelines in place. In the event that we cannot due to pandemic concerns, we will offer full refunds for sponsorships or an opportunity to sponsor the event virtually if there is interest in still proceeding by participants. The virtual event, if necessary to protect the health and wellness of our participants, would be live on Whova and Zoom platforms.

Sponsorship Signup Deadline: May 15, 2022
